

How to Connect Your WhatsApp to SalesFlow AI

Follow this simple step-by-step guide to connect your standard WhatsApp line to your SalesFlow AI Assistant and automate your sales 24/7.

Step 1: Open Your Dashboard

Log in to your SalesFlow dashboard by visiting: <https://salesaiflow.online/dashboard.html> in your web browser.

Step 2: Navigate to WhatsApp Settings

In the left-hand navigation sidebar, click on the green 'WhatsApp' link to open the integration page.

Step 3: Select Quick QR Scan

You will see two connection options. Click the card on the left labeled 'Quick QR Scan'. This utilizes our direct cloud gateway and requires no Facebook or Meta Developer credentials!

Step 4: Generate the QR Code

Click the green 'Connect / Generate QR Code' button at the bottom of the card. A unique QR code will appear on your screen in a few seconds.

Step 5: Scan Using Your Phone

Open WhatsApp on your phone and follow these steps:

- Android: Tap the three vertical dots (top-right) -> Linked Devices -> Link a Device.
- iPhone: Go to Settings (bottom-right) -> Linked Devices -> Link a Device.

Point your phone's camera at the computer screen and scan the QR code.

Step 6: Go Live!

Once scanned, your dashboard status will instantly update to 'Connected' (green dot). Your AI Assistant is now live and will automatically handle your customer messages 24/7!

Managing Your Products, Prices & Availability

Keep your catalog updated so the AI assistant can pitch your products and prices correctly:

- Adding Products & Prices: Go to the 'Products' tab on the sidebar. Click 'Add Product', fill in the name, description, price, and add an image link. Click 'Save' to immediately sync it with the AI.
- Setting Stock/Availability: Each product has an 'Available' toggle switch. If an item runs out of stock, turn the toggle OFF. The AI will instantly stop offering it and notify customers that the item is temporarily out of stock.

Pro Tip: Pausing and Resuming the AI

If you want to manually chat with a customer and pause the AI, you can do it directly inside the WhatsApp chat thread:

- Send '/handoff' in the customer's chat thread to instantly pause the AI. The bot will silently delete this command so the customer never sees it!
- Send '/handon' in the chat thread to resume the AI assistant whenever you are ready.

Alternatively, you can toggle the AI status for any customer anytime on your dashboard under the 'Handoffs' tab.
